DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 01/20/2006 has been entered.
2. Applicants' amendment dated 01/20/2006 has been received and entered. By the amendment, claim 23, 25-29 and 31-32 are now pending in the application.
3. Applicant's arguments with respect to claim 23 have been considered but are moot in view of the new ground(s) of rejections as follow.

Drawings

4. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the thin film transistor (TFT) substrate being provided on a side of a display screen must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure

Art Unit: 2871

must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 23, 25, 28-29 and 31-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kadota et al., US Patent 5,818,550, in view of Yoshida et al, US Patent No. 5,734,455.

Regarding the above claims, Kadota et al. disclose a liquid crystal display (LCD) device comprising:

. a TFT substrate having a first substrate (0) with resin color filters (9R/9G/9B) and a pixel electrode (1);

Art Unit: 2871

. a common electrode substrate having a second substrate (12) with a thickness thinner than the first substrate (compare element 0 and 12) and a common electrode (11);

. a liquid crystal layer (13)

Kadota et al, however, do not disclose the TFT substrate being provided on a side of a display screen. Yoshida et al. disclose an LCD device in which a TFT substrate can be formed on a side of a display screen (see figure 11). Therefore, it would have been obvious to one skilled in the art at the time of the invention was made to employ a TFT substrate in front of an LCD device (i.e., display screen side) as shown by Yoshida et al. in order to obtain an LCD with a high quality image (see col. 22, ln. 59).

7. Claims 26-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kadota et al., US Patent 5,818,550, in view of Yoshida et al, US Patent No. 5,734,455, further in view of Kurematsu et al., US Patent No. 5,764,318.

Regarding the above claims, the modification to the Kadota et al. disclose the claimed invention as described above except for the common substrate being of alkaline glass.

Kurematsu et al. disclose an alkaline glass can be formed in an LCD device (col. 2, ln 64-67 and col. 3, ln 1-3). Therefore, it would have been obvious to one skilled in the art at the time of the invention was made to employ an alkaline substrate as shown by Kurematsu et al. for cost efficiency (Id.).
